

AFRAME SCENE

Story:

Opening the scene would take the person to a scene of the solar system. Person would navigate through the scene, look at various planets and can click on them to view that planet related information.

Mechanism:

Person would open the webpage. Navigate around the scene dragging the mouse along the screen. Click on the desired planet to see information related to it.

Concept and Design:

Concept-

Creating a virtual display of our Solar System for learning purposes where user can navigate and also read information about planets.

Design-

Aframe entities are used to create the structure of the planets. Rotation is applied on the planets. Javascript is used to make clickable events to display the information when a user clicks on a planet.
